# 1925 AHRENS-FOX J-S-4 FIRE TRUCK

The Ahrens-Fox J-S-4 was originally shipped to the Lockland, Ohio Fire Department on February 27, 1925 where it operated as Engine 2. Lockland is a suburb of Cincinnati. The truck is fitted with the Ahrens-Fox Model J engine, a 90 horsepower, six-cylinder T-head engine which displaces 691 cubic inches. The letter "S" in the model number indicates the rear axle is "shaft-driven" (in lieu of a chain-driven) and the number "4" refers to the configuration of the apparatus: a model J-S-2 is configured with the same four cylinder piston pump ( capable of delivering over 750 gallons per minute at 120 psi) and same hose bed (with a capacity for 1,200 lineal feet of hose) as the J-S-4 but without chemical or booster tanks; model J-S-3 is identical to a J-S-2 with addition of a chemical tank; model J-S-4 is also identical to a J-S-2 with the addition of a 60-gallon booster (water) tank. The J-S-4 also carries a booster hose reel, a combination of ladders, extinguishers, and tools. As for dimensions, the J-S-4 has a 14'8" wheelbase and is roughly 22'3" long overall.

**Register No. 1235 Engine No. 783 J-S-4 Model**

# 1919 PACKARD TRUCK

The Packard is a Model E, 2-2½ ton truck built by the Packard Motor Car Company in Detroit, Michigan. It is powered by a 283 cubic inch, 4-cylinder Packard L-head engine. The truck is well-appointed with a bright brass radiator shell, unusual head lights, horn, and a myriad of other unusual brass and nickel components. The overall length of the truck is 19' 1 0" with a 144" wheelbase and it stands 8'3" in height.

**Serial No. 175434 2-2½ Model E-US Army**

# 1922 FORD MODEL T

The car that started it all! Our Ford Model T is a 1923 touring car powered by Ford's own 177 cubic inch four-cylinder "en bloc" motor (that is, all four cylinders in one block, as common now, rather than in individual castings, as common then) producing 20.2 horsepower for a top speed of 40-45 mph. The Model T is rear-wheel drive vehicle with a planetary gear-type transmission billed as "three speed." By today's standards it is considered a two-speed, since one of the three speeds counted was reverse.

Serial No. 5337554
